

Glamoora — Beauty Services Marketplace

PRD

Version: 1.0

Product: Glamoora

Role: Alpha / main marketplace vision

Purpose: Hackathon MVP + scalable foundation

Primary users: Customers, beauty/service professionals, admins

1. Product Overview

Glamoora is a beauty-services marketplace that helps customers discover beauty professionals, compare services, prices, portfolios, availability and reviews, then book a service based on location and preferred time.

For providers, Glamoora provides a digital storefront to list services, upload portfolios, define service areas, set prices and availability, receive bookings and manage appointments.

Core value proposition

Customers: Find the right beauty professional nearby, understand their work and pricing, and book without endless WhatsApp conversations.

Providers: Get discovered by nearby customers and manage services, availability and bookings from one place.

2. Initial Service Categories

1. Lash Extensions
2. Brow Embroidery
3. Massage
4. Nail Services
5. Saree Draping
6. Waxing / Hair Removal
7. Hair Styling

3. Hackathon Objective

Build a working end-to-end marketplace demonstrating:

1. Customer discovers a beauty service.
2. Customer searches and filters providers.
3. Customer opens a provider profile.
4. Customer views portfolio, services, prices and availability.
5. Customer selects a service and time.
6. Customer creates a booking.
7. Provider receives and manages the booking.
8. Booking status changes.
9. Customer reviews the completed service.

Hackathon principle: prioritize the working booking loop over secondary features.

4. User Roles

Customer

- Register/login
- Create profile
- Set location
- Browse categories
- Search providers/services
- Filter results
- View provider profiles
- View portfolios
- View services/prices
- View availability
- Create and manage bookings
- Cancel according to policy
- Leave reviews after completed bookings
- Save favourites

Beauty Professional / Provider

- Register/login
- Create professional profile
- Select categories
- Add services
- Set prices and duration
- Upload portfolio
- Set location/service area
- Set availability
- Accept/reject bookings
- View upcoming bookings
- Mark appointments completed
- View reviews
- Manage profile

Admin

- View customers/providers
- Review provider profiles
- Manage categories
- View bookings
- Handle reports
- Suspend accounts when necessary
- Manage basic marketplace settings

5. Scope

Hackathon MVP — Must Have

- Authentication
- Customer/provider roles
- Seven service categories
- Provider profiles
- Services
- Portfolio
- Price + duration
- Location/service area
- Search
- Category filters
- Availability
- Booking
- Booking status
- Customer booking history
- Provider booking dashboard
- Reviews and ratings
- Basic admin controls

Should Have

- Map view
- Favourite providers
- Notifications
- Booking cancellation
- Provider verification badge
- Simple chat

V2 / Future

- Real online payment
- Deposits
- Provider payouts
- Platform commission
- In-app chat with attachments
- AI recommendations
- AI service matching
- Smart rebooking
- Loyalty
- Promotions
- Packages

- Waitlist
- Provider analytics
- Referral system

6. Recommended Technology Stack

Frontend

Recommended:

- React Native
- Expo
- TypeScript
- Expo Router
- NativeWind / Tailwind CSS

Backend

Recommended:

- Supabase
- PostgreSQL
- Supabase Auth
- Supabase Storage
- Supabase Realtime
- Row Level Security

Alternative:

- FastAPI + PostgreSQL

Location

Use a location/map provider supporting:

- Current location
- Provider coordinates
- Service-area coordinates
- Distance calculation
- Map markers

Exact turn-by-turn navigation is not required for the hackathon.

Notifications

MVP:

- In-app booking status

Future:

- Push notifications
- Email

- WhatsApp/SMS integrations

7. Information Architecture

Customer

Bottom navigation:

1. Home
2. Discover
3. Bookings
4. Favourites
5. Profile

Provider

1. Dashboard
2. Calendar
3. Services
4. Profile
5. Settings

8. Phase-by-Phase Development

PHASE 0 — Foundation

Goal

Create the application skeleton and development environment.

Tasks

- Initialize repository
- Configure TypeScript
- Configure Expo/React Native
- Configure routing
- Configure styling
- Configure environment variables
- Connect Supabase
- Create database
- Create seed data
- Create reusable UI components

Acceptance criteria

- App launches
- Navigation works
- Supabase connection works

- Secrets are not hardcoded
- Seed data can be loaded

PHASE 1 — Authentication

Goal

Allow customers and providers to create accounts.

Customer fields

- Name
- Email
- Phone
- Profile image
- Preferred location

Provider fields

- Display/business name
- Bio
- Profile image
- Categories

Acceptance criteria

- Register works
- Login works
- Session persists
- Logout works
- Role is stored correctly

PHASE 2 — Service Categories

Create the seven categories:

```
Lash Extensions  
Brow Embroidery  
Massage  
Nail Services  
Saree Draping  
Waxing / Hair Removal  
Hair Styling
```

Category cards should show:

- Icon/image
- Category name
- Provider count
- Featured providers

Acceptance criteria

- All seven categories display
- Selecting a category filters services/providers

PHASE 3 — Provider Profiles

Provider profile displays

- Name
- Profile photo
- Bio
- Location
- Service area
- Categories
- Rating
- Review count
- Verification status
- Portfolio
- Services
- Price range
- Availability

Portfolio item

- Image
- Service/category
- Optional caption

Acceptance criteria

- Profile loads
- Portfolio displays
- Services display
- Rating displays
- Location displays

PHASE 4 — Services & Pricing

Service fields

Service name
Category
Description
Price
Duration
Location type
Active/inactive

Location types

Provider location
Customer location
Both

This supports both salon-based and mobile/home services.

Acceptance criteria

Provider can create, edit and disable services and set price/duration.

Customer can see service name, description, price and duration.

PHASE 5 — Search, Filters & Location

Search

Search by:

- Provider name
- Service name
- Category

Filters

- Category
- Distance
- Price range
- Rating
- Availability
- Service type

Sorting

- Recommended
- Distance
- Rating
- Price low → high
- Price high → low

Location

Allow:

- Current location
- Manual location

For MVP, latitude/longitude is sufficient.

Acceptance criteria

Customer can search for a service and receive matching providers.

PHASE 6 — Availability

Provider controls

- Working days
- Start/end times
- Breaks
- Unavailable dates
- Existing appointments

Example

```
Nail Service
Duration: 60 minutes

Available:
10:00-13:00
14:00-18:00
```

The system generates bookable slots.

Critical rule: overlapping bookings must not be allowed.

Acceptance criteria

- Available slots appear
- Booked slots disappear
- Provider can block time
- Overlapping bookings are prevented

PHASE 7 — Booking

Customer flow

```
Discover
→ Provider
→ Service
→ Date
→ Time
→ Booking Summary
→ Confirm Booking
```

Booking fields

```
Customer
Provider
Service
Date
Start time
End time
Price
Location
Notes
Status
Payment status
```

Statuses

```
Pending
Confirmed
Rejected
Cancelled
Completed
No-show
```

Acceptance criteria

- Customer creates booking
- Provider sees booking
- Provider accepts/rejects
- Customer sees status
- Double booking is prevented

PHASE 8 — Provider Dashboard

Dashboard

Show:

- Today's bookings
- Upcoming bookings
- Pending requests
- Completed appointments
- Estimated earnings

Provider actions

- Accept
- Reject
- Cancel
- Mark completed
- View booking details

Calendar

- Daily view
- Weekly view
- Blocked time

Acceptance criteria

Provider can manage the complete booking lifecycle.

PHASE 9 — Customer Booking Management

Tabs

Upcoming
Completed
Cancelled

Details

- Provider
- Service

- Date
- Time
- Price
- Location
- Status
- Cancellation information

Actions

- Cancel
- View provider
- View booking
- Review completed booking

PHASE 10 — Reviews & Ratings

Only customers with a completed booking can review.

Review

Rating: 1-5
Written review
Optional photo

Acceptance criteria

- Review requires completed booking
- One review per booking
- Review appears on provider profile
- Average rating updates

PHASE 11 — Favourites

Customer can:

- Favourite provider
- Remove favourite
- View favourites
- Open provider profile

Future:

- Favourite-provider promotions
- Availability alerts

PHASE 12 — Notifications

MVP

- Booking submitted
- Booking accepted
- Booking rejected
- Booking cancelled
- Booking completed
- Review reminder

Future

- 24-hour reminders
- Provider updates
- Promotions
- Favourite-provider availability

PHASE 13 — Messaging

Optional for the hackathon.

MVP

Simple customer ↔ provider text chat.

Future

- Images
- Booking-linked conversations
- Automated booking messages

PHASE 14 — Payment Architecture

Hackathon MVP

Use a mock payment state:

```
Unpaid
Mock Paid
Refunded
```

Do not spend hackathon time building a real payment gateway unless required.

V2

- Deposits
- Full payment
- Refunds
- Provider payouts
- Platform commission
- Payment history

Keep payment processing behind a service abstraction.

PHASE 15 — Admin Dashboard

Overview

Total Customers
Total Providers
Total Bookings
Completed Bookings
Cancelled Bookings
Active Services

Provider management

- View provider
- Review information
- Verify
- Suspend

Moderation

- Review reports
- Review portfolio content
- Remove inappropriate content
- Handle complaints

PHASE 16 — AI Features

Only add AI after the core marketplace loop works.

AI Recommendation/Search

Customer can say:

> I need a nail service under RM100 near me this Saturday.

AI converts the request into structured marketplace filters:

- Category
- Budget
- Location
- Date
- Time

AI Beauty-Service Assistant

Can:

- Explain service categories
- Compare services
- Find providers
- Explain booking requirements

Do not use AI for medical diagnosis or medical claims.

AI Provider Assistant

Can help:

- Write service descriptions
- Create captions
- Tag portfolio items
- Suggest bundles
- Summarize reviews

9. Database Schema

users

```

10. API Requirements

Authentication

```
POST /auth/register
POST /auth/login
POST /auth/logout
GET /auth/me
```

Categories

```
GET /categories
GET /categories/:id
```

Providers

```
GET /providers
GET /providers/:id
POST /providers
PATCH /providers/:id
```

Services

```
GET /providers/:id/services
POST /services
PATCH /services/:id
DELETE /services/:id
```

Portfolio

```
GET /providers/:id/portfolio
POST /portfolio
DELETE /portfolio/:id
```

Availability

```
GET /providers/:id/availability
POST /availability
PATCH /availability/:id
DELETE /availability/:id
```

Bookings

```
POST /bookings
GET /bookings
GET /bookings/:id
PATCH /bookings/:id/status
POST /bookings/:id/cancel
```

Reviews

```
POST /reviews
GET /providers/:id/reviews
```

Favourites

```
POST /favourites
DELETE /favourites/:providerId
GET /favourites
```

11. Core Customer Journey

```
Open Glamoorra
↓
Select location
↓
Choose service
↓
See nearby providers
↓
Filter by price / distance / rating
↓
Open provider
↓
View portfolio
↓
Select service
↓
View price + duration
↓
Select date
↓
Select time
↓
Confirm booking
↓
Provider accepts
↓
Service completed
↓
Customer leaves review
```

12. Core Provider Journey

```
Register
↓
Create profile
↓
Select categories
↓
Add services
↓
Set price + duration
↓
Upload portfolio
↓
Set location/service area
↓
Set availability
↓
Receive booking
↓
Accept booking
↓
Complete appointment
↓
Receive review
```

13. UI Direction

Glamoorra should feel:

- Modern
- Beauty-focused
- Trustworthy

- Premium but approachable
- Mobile-first

Home screen

Glamoora

"What beauty service are you looking for?"

[Search]

Categories

■ 3.2 km away

Lash Extensions

From RM80

[View Profile]

14. Security & Privacy

Minimum requirements:

- Never expose passwords.
- Never commit API keys/secrets.
- Use environment variables.
- Protect authenticated operations.
- Use Row Level Security where supported.
- Customers can only modify their own bookings.
- Providers can only modify their own services/availability.
- Reviews require completed bookings.
- Validate uploaded files.
- Restrict image types/sizes.
- Do not expose precise customer location unnecessarily.
- Do not store sensitive payment information directly.

15. Trust & Verification

Provider states:

Unverified
Pending Verification
Verified
Suspended

The MVP should not falsely claim providers are verified if verification has not actually occurred.

16. Analytics

Customer events

signup
category_view
provider_view
service_view
booking_started
booking_completed
booking_cancelled
review_submitted
favourite_added

Provider events

Marketplace metrics

Search → provider view conversion
Provider view → booking conversion
Booking acceptance rate
Cancellation rate
Completion rate
Average booking value
Repeat booking rate

17. Hackathon Build Priority

Priority 1 — Core

- Authentication
- Provider profile
- Categories
- Services
- Search
- Booking
- Provider dashboard

Priority 2 — Trust

- Portfolio
- Reviews
- Ratings

- Location

Priority 3 — Polish

- Favourites
- Notifications
- Loading states
- Empty states
- Error handling
- Better UI

Priority 4 — AI

- Natural-language search
- Provider recommendations
- AI service assistant

Do not start with AI before the marketplace works.

18. Hackathon Demo Script

Problem

Customers often jump between Instagram, WhatsApp and Facebook to find beauty professionals, compare prices and find available slots.

Solution

Glamoora brings discovery, portfolios, pricing, availability and booking into one marketplace.

Demo

1. Open Glamoora.
2. Search for a beauty service.
3. Show nearby providers.
4. Filter providers.
5. Open a provider.
6. Show portfolio.
7. Show services and prices.
8. Select a service.
9. Select date/time.
10. Book.
11. Switch to provider account.
12. Show incoming booking.
13. Accept booking.
14. Switch back to customer.
15. Show confirmed booking.
16. Complete booking.

- 17. Leave review.
- 18. Show provider rating update.

Optional AI demo

Customer types:

> I need a nail service under RM100 near me this Saturday.

AI converts this into marketplace filters and recommends matching providers.

19. Definition of Done — Hackathon MVP

- ☐ Customer can register.
- ☐ Provider can register.
- ☐ Seven categories exist.
- ☐ Provider can create profile.
- ☐ Provider can add services.
- ☐ Provider can set prices.
- ☐ Provider can upload portfolio.
- ☐ Provider can set availability.
- ☐ Customer can search providers.
- ☐ Customer can filter providers.
- ☐ Customer can view provider profile.
- ☐ Customer can view portfolio.
- ☐ Customer can view services.
- ☐ Customer can see available slots.
- ☐ Customer can create booking.
- ☐ Provider receives booking.
- ☐ Provider can accept/reject.
- ☐ Customer sees booking status.
- ☐ Completed booking can receive review.
- ☐ Provider rating updates.
- ☐ Duplicate/overlapping bookings are prevented.

20. Final Hackathon Build Sequence

```

PHASE 10 – Reviews
↓
PHASE 11 – Favourites
↓
PHASE 12 – Notifications
↓
PHASE 13 – AI
↓
PHASE 14 – Testing + Demo

21. Final Prompt for Devin

You are the lead full-stack engineer for Glamooro.

Read the Glamooro PRD completely before writing code.

Glamooro is a beauty-services marketplace connecting customers with independent beauty/service professionals.

Initial categories:

1. Lash Extensions
2. Brow Embroidery
3. Massage
4. Nail Services
5. Saree Draping
6. Waxing / Hair Removal
7. Hair Styling

PRIMARY HACKATHON GOAL:

Build a functional marketplace MVP demonstrating:

Customer:

Discover → Search → Provider Profile → Portfolio → Service → Availability → Booking

Provider:

Register → Profile → Services → Portfolio → Availability → Receive Booking → Accept/Reject → Complete

Customer:

Completed Booking → Review → Provider Rating

TECHNOLOGY:

Use the existing project stack if one already exists.

If starting from scratch:

- React Native
- Expo
- TypeScript
- Expo Router
- NativeWind/Tailwind
- Supabase
- PostgreSQL
- Supabase Auth
- Supabase Storage

IMPORTANT:

Do NOT implement every future feature.

Prioritize the core marketplace loop.

Build in phases.

After each phase:

1. Run the application.
2. Run tests/build checks.
3. Fix errors.
4. Verify acceptance criteria.
5. Do not break previous functionality.

Use realistic seed data for the seven categories.

Do not use real customer personal data.

Do not hardcode API keys or secrets.

Keep payment logic mock/abstract for the hackathon.

FINAL DEMO:

Customer discovers Lash Extensions

- searches providers
- views portfolio
- selects service
- selects time
- creates booking
- provider accepts
- customer sees confirmation
- booking is completed
- customer submits review
- provider rating updates.

Keep the implementation simple, modular and demo-ready.

22. Product Principle

Discover → Evaluate → Book → Experience → Review

The hackathon should prove that this core loop works. Everything else is secondary.
